

Engage your Pharmacy Network Around Immunizations!

Vaccines are key to ensuring the health and wellness of your members. EQuIPP® currently hosts two vaccination-based measures. With the promise of a COVID-19 vaccine soon, PQS plans to launch a COVID-19 vaccination rate measure. With the largest network of connected pharmacies, look to PQS to help engage pharmacies and provide visibility to your members who still need to complete their vaccinations!

Pneumonia Vaccination in Older Adults

- Measures the pneumonia vaccination rate of members aged 65 or older.
- Coordinates medical and pharmacy claims together to provide a rate of members who have at least one pneumonia vaccination since turning 65.
- Members are attributed to the pharmacy who fills the majority of their medications and the pharmacy is able to outreach to that member to complete a vaccination.

Pneumococcal pneumonia

kills about
1 in 20

older adults who get it

<https://www.cdc.gov/features/adult-pneumococcal/index.html>

95%
pharmacies connected in
EQuIPP®

18 to 26
million flu medical visits

Estimated by CDC
in 2019 - 2020

Annual Influenza Vaccination Measure

- Measures the influenza vaccination rate for health plan patients six months or older
- Coordinates medical claims data with pharmacy data to calculate a performance score (to help account for your patients who may have already received the vaccination through their provider office)
- Members are attributed to the pharmacy filling the majority of their medications.
